Adify Skills
n8n Automation Mastery

📘 CLASS NOTES

🔌 Module 3 · APIs, Webhooks & Integrations

DAY 07 of 25

HTTP Request & REST APIs Mastery

"Agar API hai, toh n8n se connect ho sakta hai."

⚡ AAJ HUM YEH BANAYENGE

Morning Briefing Bot (Weather + News + Currency)

Har subah 7 baje teen free APIs se data laata hai — Delhi ka mausam, top 3 news, USD→INR rate — aur ek saaf Telegram message bhejta hai. Koi API key nahi chahiye.

HTTP Request | cURL import | Postman

Naam: _____ Class date: _____

2 ghante ki live class · 7:00 PM – 9:00 PM IST

🧭 Aaj ka roadmap

Ek nazar mein poori class — kya, kyun aur kitne time mein.

💡 Yeh lesson kyun zaroori hai?

HTTP Request node n8n ka "master key" hai. Jis app ka ready node nahi, uski API se bhi connect ho jaate hain.

🎯 Aaj ke baad aap yeh kar paoge

01 REST basics: GET, POST, PUT, DELETE

🌍 Library: kitaab lena (GET), nayi kitaab dena (POST), update (PUT), wapas karna (DELETE).
⚙️ GET /users, POST /leads, PUT /leads/12, DELETE /leads/12

02 Headers, query params, body (JSON/form)

🌍 Courier: lifafe par pata (URL), stamp (header), andar chitthi (body).
⚙️ Header: Authorization: Bearer KEY · Query: ?city=Pune · Body: { "name": "Aman" }

03 Reading API docs like a pro

🌍 Naye phone ka manual — pehle "Getting started", phir features.
⚙️ Docs mein dhoondho: Base URL, Authentication, Endpoints, Example request.

04 cURL import in HTTP Request node

🌍 Recipe ka photo bhej do, cook khud bana dega.
⚙️ Docs se cURL copy → HTTP node → "Import cURL" → sab fields bhar gayi.

05 Pagination & rate-limit handling

🌍 Kitaab ke 10 pages — ek-ek palatna; ek din mein limit.
⚙️ Pagination: page=1,2,3… · 429 aaye to Wait + retry.

06 Response parsing & error codes

🌍 Doctor ki report: normal (200), "mila nahi" (404), "pass nahi hai" (401).
⚙️ 200 OK · 400 bad input · 401 auth · 404 not found · 429 rate limit · 500 server

⏱ Class ka plan (2 ghante)

10m	35m	45m	20m	10m

`0:00-0:10` **Recap**

🪄 *Cricket match se pehle warm-up karte ho na? Recap dimaag ka warm-up hai.*

`0:10-0:45` **Concept: APIs**

Restaurant waiter analogy + live Postman demo

🪄 *Restaurant mein tum kitchen mein nahi jaate — waiter jaata hai. API waiter hai, n8n customer hai.*

`0:45-1:30` **Live Build**

Weather + news morning briefing bot

🪄 *Aaj ki kahani yaad hai — 'Restaurant ka waiter = API'? Ab wahi kahani n8n mein banayenge. Har scene ek node hai: ek-ek block jodo aur har block ke baad dekho sab chal raha hai ya nahi.*

`1:30-1:50` **API Hunt**

Students pick a public API & integrate

🪄 *Practice match — jitna yahan girenge, utna asli match mein kam girenge.*

`1:50-2:00` **Q&A + Homework**

🪄 *Ghar jaane se pehle bag check — sab samajh aaya? Homework diary mein likha?*

🧠 Concepts — aasaan bhasha mein

Har concept ke saath ek real-life analogy. Analogy yaad rahegi to concept bhi yaad rahega.

CONCEPT 01

API

Do software ke beech baat karne ka tareeka.

🪄 **Analogy:** Restaurant ka waiter — aap order dete ho, kitchen se khana laata hai

CONCEPT 02

HTTP methods

GET (lao), POST (banao), PUT/PATCH (update), DELETE (hatao).

🪄 **Analogy:** CRUD = Create Read Update Delete

CONCEPT 03

Headers & Auth

Request ke saath extra info — API key, content type.

🪄 **Analogy:** Building entry pass

CONCEPT 04

Pagination

API data pages mein deti hai — sab pages laane padte hain.

🪄 **Analogy:** Kitaab ke page palatna

🔑 Aaj ka main idea

API do software ke beech baat karne ka tareeka hai. Aap request bhejte ho (method + URL + headers + body), server response deta hai (JSON + status code). HTTP Request node se n8n kisi bhi API se baat kar sakta hai.

- Zomato app restaurant ki API se menu laata hai
- Weather app mausam ki API se temperature
- UPI app bank ki API se payment

📖 Ek kahani se samjho: Restaurant ka waiter = API

1 🧑 **Aap order dete ho** = HTTP Request (GET/POST)

2 👨‍🍳 **Waiter kitchen jaata hai** = API server

3 📜 **Menu card padha** = API docs

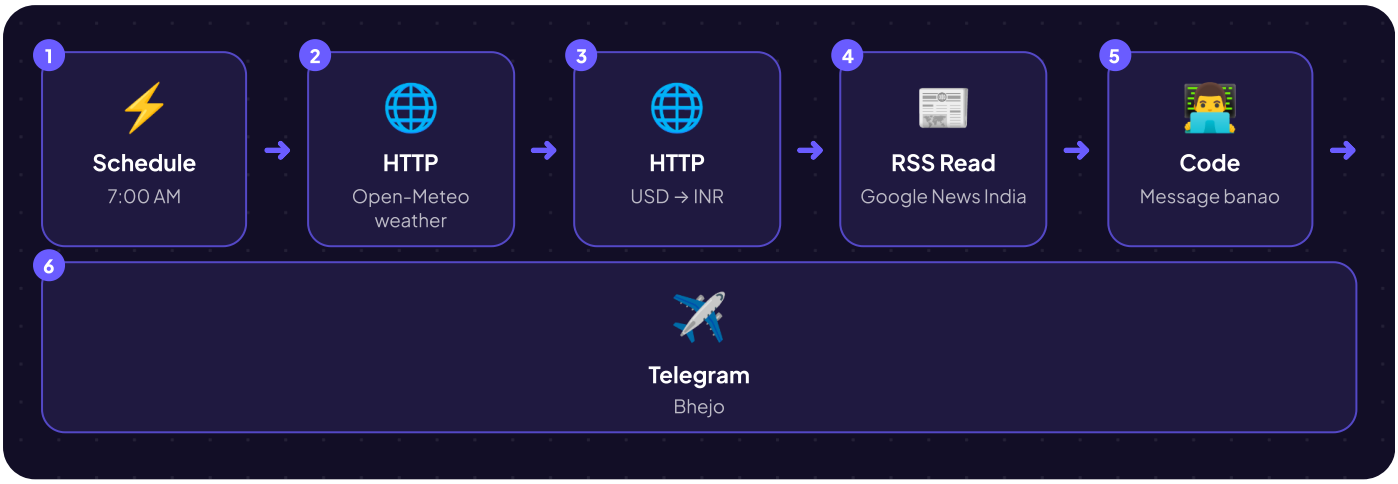

4 🍛 **Khana aaya** = JSON response

5 🤦 **"Aaj khatam" bola** = Error code (404/429)

🪄 Ek line mein: “Restaurant mein tum kitchen mein nahi jaate — waiter jaata hai. API waiter hai, n8n customer hai.”

🗺️ Aaj ka workflow: Morning Briefing Bot (Weather + News + Currency)

Data left se right chalta hai. Har dabba ek n8n node hai.

💰 Isse kitna kama sakte ho?

Founders, traders (morning briefing bot) — aam taur par **₹3,000 – ₹8,000 + ₹500/mahina**. *(Andaaza hai; client aur scope ke hisaab se badalta hai.)*

🛠 Step-by-step build — n8n kholo aur saath chalo

1 ⚡ **Schedule Trigger**
Roz 7 AM

2 🌐 **HTTP Request**
Weather API (Open-Meteo, bina key) — city ke coordinates

3 🌐 **HTTP Request**
News API — top headlines

4 🔗 **Merge**
Weather + news combine

5 👨‍💻 **Code**
Sundar formatted message banao

6 ✈️ **Telegram**
Morning briefing bhejo

✅ Har step ke baad **Execute step** dabao aur output check karo. Sab green ho to workflow **Active** karo.

🔑 Setup (import ke baad)

- [ ] Connect: **Telegram bot token (BotFather se)**
- [ ] Apne shehar ke liye Weather URL mein latitude/longitude badlo

✅ Test kaise karein

1. "Test workflow" → Telegram check karo
2. Har HTTP node ka raw JSON dekho — data kahan se aa raha hai

⚖️ Pehle vs Ab — farak dekho

Yahi farak client ko dikhana hai. Time bachta hai = paisa bachta hai.

😩 Pehle (manual)

Weather app kholna	2 min
News app kholna	5 min
Family group par likhna	5 min
	12 min

⚡ Ab (n8n)

7 AM briefing Telegram par auto

0 min

⏱ Roz 12 min bache, family ko daily update.

⌨️ Aaj ka key snippet

Copy karke n8n mein paste karo — 📋 Select karke copy karo

```
curl "https://api.open-meteo.com/v1/forecast?latitude=28.61&longitude=77.21&current=temperature_2m"
```

📦 Sample data — input se output tak

📥 Input — 📋 Select karke copy karo

```
{
  "current": {
    "temperature_2m": 24.3,
    "wind_speed_10m": 8
  }
}
```

📤 Output — 📋 Select karke copy karo

```
{
  "message": "☀️ Good morning! Delhi: 24°C\n📰 Top 3 news…"
}
```

💬 Copy-paste prompts

ChatGPT / Claude mein seedha paste karo. PDF mein text select karke copy ho jata hai.

💬 Build it with ChatGPT / Claude

📋 Select karke copy karo

```
Act as an n8n expert and teacher. Help me build this workflow in n8n step by step (n8n 1.x UI):

Goal: Har subah 7 baje teen free APIs se data laata hai — Delhi ka mausam, top 3 news, USD→INR rate — aur ek saaf Telegram message bhejta hai. Koi API key nahi chahiye.

Flow: Schedule (7:00 AM) → HTTP (Open-Meteo weather) → HTTP (USD → INR) → RSS Read (Google News India) → Code (Message banao) → Telegram (Bhejo)

For each node tell me: which node to add, exact settings, and the expressions to use. Then tell me how to test it and the 3 most common errors beginners hit.
```

💬 Debug helper prompt

📋 Select karke copy karo

```
I'm building the n8n workflow "Morning Briefing Bot (Weather + News + Currency)" (nodes: Every Day 7 AM, Weather, Currency, Top News, Top 3, Build Message, Send Briefing).
Node "<NODE NAME>" gives this error:
<PASTE ERROR>

Input JSON of that node:
<PASTE INPUT>

Explain the cause in simple words and give me the exact fix (settings or expression).
```

📥 Workflow ko n8n mein kaise laayein

1. **QR scan karo** ya link kholo — workflow ki JSON file khulegi.
2. Poora text copy karo (`Ctrl` + `A` , `Ctrl` + `C`).
3. n8n mein naya workflow kholo → canvas par click → `Ctrl` + `V` . Ya … menu → *Import from File*.
4. Upar wala Setup checklist poora karo aur **Test** dabao.

⚡ Workflow JSON
7 nodes · ready to import
adifyskills.com/workflows/day-07-morning-briefing-telegram.json

adifyskills.com/day/7

Atak gaye? Yeh check karo

Error aana seekhne ka hissa hai — sab atakte hain. Neeche wale points se 90% problems solve ho jaati hain.

Agar yeh ho raha hai…	To yeh karo
Node par laal ⚠ triangle?	Account connect nahi hua. Node kholo → Credential → "Telegram bot token (BotFather se)" connect karo.
Time par apne aap nahi chala?	"Active" toggle on hai? Settings mein timezone Asia/Kolkata check karo.

⚠ Yeh galtiyan sabse common hain

- ! API key ko URL mein hardcode karna (credential use karo)
- ! 429 Too Many Requests ko ignore karna
- ! Response "file" hai aur JSON expect karna

⭐ Pro tips — time bachane wali tricks

- ★ API docs se cURL copy karo → HTTP node mein "Import cURL"
- ★ Settings → Retry on fail + wait 5s
- ★ Pagination option se automatic next pages

Phir bhi atke? Koi baat nahi 🙂
Screenshot + error message ke saath WhatsApp par poochho →

Practice + Challenge

Padhne se zyada banane se seekhte hain. Ek-ek level upar jaao.

🛠 Live lab

Morning briefing: weather + top news + currency rate → ek formatted Telegram message.

📝 Homework

Koi bhi 2 public APIs integrate karo with pagination.

- ☐ Homework ho gaya

BEGINNER
Random joke API se joke laao ☐

INTERMEDIATE
Paginated API ke saare pages laao ☐

ADVANCED
Retry + exponential backoff Code se ☐

🧩 Aaj ka challenge — pehle khud try karo

🎯 Briefing mein Delhi ki jagah apne shehar ka mausam dikhao aur ek "☂️ Chhata le jao" line jodo agar baarish ho.

💡 Hint 1
Open-Meteo URL mein latitude/longitude badalte hain; Google par "<city> latitude longitude" search karo.

💡 Hint 2
URL mein &current= ke saath precipitation bhi maango, phir Code mein check karo > 0.

✅ Solution aakhri page par hai — pehle 5 minute khud socho 😉

🎯 2 minute ka self-check

Sahi option par gol ghera lagao. Answers aakhri page par — score sirf aapke liye hai.

Q1. Data sirf padhne ke liye method?

- (A) PUT
- (B) POST
- (C) GET
- (D) DELETE

Q2. 429 error ka matlab?

- (A) Server down
- (B) Unauthorized
- (C) Not found
- (D) Rate limit exceeded

Q3. API docs se fastest setup?

- (A) Import cURL
- (B) Screenshot
- (C) Code node
- (D) Manually type

Q4. 401 error?

- (A) Auth problem
- (B) Success
- (C) Redirect
- (D) Timeout

📖 Aaj ke naye shabd

Node
Workflow ka ek dabba/step. Har node ek kaam karta hai (email bhejna, data laana…).

Trigger
Jo workflow ko START karta hai — jaise alarm, naya email, ya form submit.

API
Do apps ke baat karne ka tareeka. Ek app sawaal bhejta hai, doosra jawab (data) deta hai.

JSON
Data likhne ka format: { "naam": "Ravi", "city": "Delhi" } — key aur value ke jode.

Merge
Do raaston ka data wapas ek jagah jodna.

HTTP Request
Node jo kisi bhi API ko call kar sakta hai — n8n ka universal connector.

Schedule
Fixed time par workflow chalana — roz, har ghante, har Monday.

✍️ Meri notes

Class mein jo naya laga, jo doubt aaya — yahan likho. Kal revise karna aasaan hoga.

⏭ Kal kya seekhenge — Day 8

Authentication, Credentials & Webhooks

"Real-time apps banane ka secret: webhooks."

☐ **Day 7 complete! 🎉**

Tick karo aur website par bhi ✅ dabao.

🔑 Answer key + useful links

Pehle khud try kiya? Ab check karo. Galat hua to explanation padho — wahi asli seekh hai.

Q1 → C
GET

Q2 → D
Rate limit exceeded

Q3 → A
Import cURL

Q4 → A
Auth problem

✅ Challenge ka solution

URL: ...&current=temperature_2m,precipitation... Code: const rain = w.precipitation > 0 ? "\n☔ Chhata le jao!" : ""; text mein jod do.
