Module 1 · Automation Foundations

DAY 03 of 25

n8n Data Model: Items, JSON & Binary

"Jo data samajh gaya, woh n8n samajh gaya."

⚡ AAJ HUM YEH BANAYENGE

CSV Sales → City-wise Report Email

Form par sales ki CSV file upload karo. Workflow file padhta hai, city-wise total nikaalta hai aur ek saaf HTML table email karta hai.

Split Out | Aggregate | Summarize | Extract from File

Naam: _____ Class date: _____

2 ghante ki live class · 7:00 PM – 9:00 PM IST

🧭 Aaj ka roadmap

Ek nazar mein poori class — kya, kyun aur kitne time mein.

💡 Yeh lesson kyun zaroori hai?

n8n mein sab kuch "items" hai. Jo student items ko samajh gaya, usse koi bhi workflow mushkil nahi lagega.

🎯 Aaj ke baad aap yeh kar paoge

01 JSON basics: objects, arrays, nesting

🌍 Visiting card: Naam, Phone, Email — har field ka ek label aur value.
⚙️ {"name": "Aman", "phones": ["98...", "99..."], "address": {"city": "Pune"}}

02 n8n items — har node items ki list process karta hai

🌍 Conveyor belt par 10 boxes — machine har box par same kaam karti hai.
⚙️ HTTP se 10 users aaye → Edit Fields har user par chala → 10 output items.

03 Item linking & paired items

🌍 Order slip aur uska bill — dono ek doosre se jude hain.
⚙️ Paired items se pata rehta hai ki output item kis input item se bana.

04 Binary data: files, images, PDFs

🌍 Courier mein letter (JSON) + parcel attached (binary).
⚙️ Gmail attachment → binary.data → Extract from File → text.

05 Split Out, Aggregate & Summarize nodes

🌍 Mithai ka dabba kholna (split), wapas bharna (aggregate), ginti karna (summarize).
⚙️ Order ke line items Split Out → Summarize by product → Aggregate into one email.

06 Data pinning & mock data for testing

🌍 Rough copy par practice — final copy kharab nahi hoti.
⚙️ API ka output pin karo → aage ke nodes bina API call ke test karo.

⏱ Class ka plan (2 ghante)

10m	40m	40m	20m	10m

`0:00-0:10` **Recap**

🪄 Cricket match se pehle warm-up karte ho na? Recap dimaag ka warm-up hai.

👩‍🏫 2 students se homework screen share karwao. Galti wala homework bhi dikhao — sabse zyada seekh wahin se aati hai.

`0:10-0:50` **Concept: Data Structure**

Visual walkthrough of items flow

🪄 Teacher ke paas 30 copies hain. Woh har copy par same kaam karti hai — check karna, marks dena. n8n bhi har item par wahi karta hai.

👩‍🏫 Pehle real-life example se shuru karo, phir n8n screen dikhao. Har concept ke baad 1 student se apne shabdon mein dobara bulwao.

`0:50-1:30` **Live Build**

CSV upload → clean → split → aggregate report

🪄 Aaj ki kahani yaad hai — 'Tiffin factory ki assembly line'? Ab wahi kahani n8n mein banayenge. Har scene ek node hai: ek-ek block jodo aur har block ke baad dekho sab chal raha hai ya nahi.

👩‍🏫 Har 10 minute par poocho "sabka green tick aaya?". Jaan-boojh ke ek galti live hone do aur use debug karke dikhao.

1:30-1:50 **Quiz + Challenge**

Module 1 quiz (15 questions)

🪄 *Practice match — jitna yahan girenge, utna asli match mein kam girenge.*

👩‍🏫 Pehle 5 minute akele try karne do, phir hint do. Jo solve kare use screen share karwao.

1:50-2:00 **Q&A + Homework**

🪄 *Ghar jaane se pehle bag check — sab samajh aaya? Homework diary mein likha?*

👩‍🏫 Chat se top 3 doubts live solve karo. Homework ka pehla step class mein hi karwa do, taaki koi blank na baithe.

🧠 Concepts — aasaan bhasha mein

Har concept ke saath ek real-life analogy. Analogy yaad rahegi to concept bhi yaad rahega.

CONCEPT 01

JSON

Data likhne ka format: { "key": "value" }. Objects {} aur arrays [].

🪄 **Analogy:** Form ke fields aur unke jawab

CONCEPT 02

Items

Har node items ki LIST leta hai aur har item par kaam karta hai.

🪄 **Analogy:** Assembly line par boxes

CONCEPT 03

Split Out vs Aggregate

Split Out: 1 item ki list → kai items. Aggregate: kai items → 1 list.

🪄 **Analogy:** Packet kholna vs packet bharna

CONCEPT 04

Binary data

Files (PDF, image) JSON ke saath "binary" property mein chalti hain.

🪄 **Analogy:** Courier ke saath attached parcel

🔑 Aaj ka main idea

n8n mein data "items" ki list ke roop mein chalta hai. Har item ek JSON object hai — jaise ek form ka ek jawab. Agar 10 items aaye, to agla node 10 baar chalega. Yeh samajh aa gaya to n8n 50% aa gaya.

- Attendance register: har line = ek student = ek item
- Shopping list: har cheez = ek item
- WhatsApp group ke 20 messages = 20 items

📖 Ek kahani se samjho: Tiffin factory ki assembly line

1 📦 **Ek bada dabba aaya (CSV)**
= Extract from File

2 📤 **Dabba khola, 50 tiffin nikle**
= Split Out → 50 items

3 🧹 **Toote tiffin hataye**
= Filter

4 🏙️ **City-wise ginti**
= Summarize

5 🚚 **Report bhej di**
= Gmail

🪄 Ek line mein: “Teacher ke paas 30 copies hain. Woh har copy par same kaam karti hai — check karna, marks dena. n8n bhi har item par wahi karta hai.”

🔬 Gehraai se samjho — har concept andar se

Kya hai, n8n andar kya karta hai, kab use karein, kab nahi, example aur common galti.

01 JSON

📖 **Kya hai:** JSON data likhne ka ek format hai jo har app samajhta hai. Isme "key": value ke jode hote hain. { } ke andar ek cheez (object) hoti hai, [ ] ke andar list (array).

⚙️ **Andar kaise:** n8n mein har node ka data JSON hi hota hai. Output panel mein teen view milte hain: Table, JSON aur Schema. Kisi field tak pahunchne ke liye expression mein raasta likhte hain: $json.city, nested ho to $json.customer.name, list ho to $json.items[0].

✅ **Kab use karein**
Har jagah — API se data aata hai JSON mein, Sheets ki row JSON banti hai, form ka jawab JSON hai. JSON padhna aana = n8n ka 50% samajh aana.

⛔ **Kab nahi**
JSON khud haath se likhte waqt last comma ya quote bhoolna sabse common galti hai — JSON mein comments (//) bhi allowed nahi hote.

🧪 **Example:** { "city": "Delhi", "amount": 1200, "paid": true, "tags": ["new", "upi"] } — city text hai, amount number, paid true/false, tags list.

⚠️ **Common galti:** "1200" (quotes mein = text) aur 1200 (number) ko same samajhna. Text ko jodoge to "1200" + "300" = "1200300" banega. Number() se convert karo.

🪄 **{ } = ek cheez, [ ] = list, "key": value. Quotes wala number = text.**

02 Items

📖 **Kya hai:** n8n mein data hamesha ITEMS ki list mein chalta hai. Ek item = ek JSON object (jaise ek row, ek lead, ek email). Node ko 20 items mile to woh by default har item par alag-alag kaam karta hai.

⚙️ **Andar kaise:** Output panel ke upar likha hota hai "20 items". Gmail node ko 20 items mile to 20 emails jaayenge — yeh n8n ka built-in loop hai, alag se Loop lagane ki zaroorat nahi. Code node mein $input.all() se saare items milte hain, aur $json se current item.

✅ **Kab use karein**
Har us jagah jahan "har ek ke liye" kaam ho: har row ke liye email, har lead ke liye message, har file ke liye upload.

⛔ **Kab nahi**
Jab aapko 20 alag messages nahi, 1 summary chahiye — tab items ko pehle Aggregate/Summarize/Code se ek item mein jodo, warna 20 emails chale jaayenge.

🧪 **Example:** CSV ki 20 rows → Read CSV ke baad 20 items. City-wise Total (Code) ne unhe 5 items (5 cities) banaya. HTML Table ne 5 ko 1 item banaya → 1 email.

⚠️ **Common galti:** Report ek bhejni thi, par 20 emails chale gaye — kyunki last node se pehle items ek nahi kiye. Hamesha Gmail se pehle output panel mein "1 item" check karo.

🪄 **Node har item par alag chalta hai. 1 result chahiye to pehle items jodo.**

03 Split Out vs Aggregate

📖 **Kya hai:** Split Out: ek item ke andar ki list ko kholkar alag-alag items banata hai. Aggregate: kai items ko jodkar ek item (list) banata hai. Dono ek-doosre ke ulte hain.

⚙️ **Andar kaise:** API aksar ek item mein { orders: [10 orders] } bhejti hai — Split Out "orders" field ko 10 items mein tod deta hai taaki har order par alag kaam ho. Summarize node group by + sum/count karta hai; Code node mein yahi kaam JavaScript se karte hain (jaisa aaj ke build mein).

✅ **Kab use karein**
Split Out: list ke har element par kaam karna ho. Aggregate/Summarize: report, total, ek message mein sab kuch.

⛔ **Kab nahi**
Har baar Code node mat likho — simple group/sum ke liye Summarize node kaafi hai aur galti kam hoti hai. Code tab jab logic zyada ho.

🧪 **Example:** Aaj: 20 sales rows → Code (group by city) → 5 items → Code (HTML table) → 1 item. Same kaam Summarize node se: Group by "city", Sum "amount", Count rows.

⚠️ **Common galti:** Split Out mein galat field naam dena (jaise "Orders" jabki field "orders" hai) — output khaali aata hai. Field naam drag karke daalo.

🪄 **Split Out = packet kholna (1 → many). Aggregate = packet bharna (many → 1).**

04 Binary data

📖 **Kya hai:** Files (CSV, PDF, image, audio) ko n8n "binary data" kehta hai. Yeh JSON se alag, item ke saath ek attachment ki tarah chalti hain.

⚙️ **Andar kaise:** Har item ke do hisse ho sakte hain: json (text data) aur binary (files). Output panel mein "Binary" tab dikhta hai jisme file ka naam, type aur size hota hai. Binary field ka ek naam hota hai (jaise "sales_csv" ya "data") — Extract from File, Gmail attachment, Drive upload sab isi naam se file uthate hain.

✅ **Kab use karein**
File upload/download, PDF se text nikaalna, image AI ko bhejna, email attachment, Drive par save karna.

⛔ **Kab nahi**
Badi files (100MB+) ko baar-baar workflow mein ghumaana memory khatam kar sakta hai. Zaroorat ho to pehle Drive/S3 par rakho aur link aage bhejo.

🧪 **Example:** Form par CSV upload → binary field "sales_csv" → Extract from File (Input Binary Field: sales_csv) → har row JSON item ban gayi.

⚠️ **Common galti:** Extract from File mein binary field ka naam galat ("data" likha, jabki file "sales_csv" naam se aayi) → error "No binary data found". Pichhle node ke Binary tab mein asli naam dekho.

🪄 **json = baat, binary = parcel. Parcel ka naam (binary field) sahi likho.**

🗺️ Aaj ka workflow: CSV Sales → City-wise Report Email

Data left se right chalta hai. Har dabba ek n8n node hai.

📸 Asli n8n mein import karne par yeh dikhega. Laal ⚠️ = account (credential) connect karna baaki.

💰 Isse kitna kama sakte ho?

Distributors, D2C brands (daily/weekly sales report) — aam taur par **₹5,000 – ₹12,000**. *(Andaaza hai; client aur scope ke hisaab se badalta hai.)*

🛠 Step-by-step build — n8n kholo aur saath chalo

1. ⚡ **Manual Trigger**
   Testing ke liye
2. 🌐 **HTTP Request**
   CSV file URL se download (Response: File)
3. 📄 **Extract from File**
   Operation: Extract from CSV → har row ek item
4. 🔀 **Filter**
   amount > 0 (khaali/galat rows hatao)
5. 📈 **Summarize**
   Group by: city, Sum: amount, Count: orders
6. 📧 **Gmail**
   City-wise summary table email

✅ Har step ke baad **Execute step** dabao aur output check karo. Sab green ho to workflow **Active** karo.

🔑 Setup (import ke baad)

- [ ] Connect: **Gmail (Google OAuth)**
- [ ] Sample CSV download karo (neeche link) — columns: order_id, city, amount

✅ Test kaise karein

1. Form ka Test URL kholo → sample-sales.csv upload karo
2. Har node ka output dekho: items kaise group hue
3. Email mein table check karo

AdifySkills DIGITAL MARKETING INSTITUTE +91 83838 91716

🚚 Data ka safar — har node ke baad

Aaj ke build mein data kaise badalta hai. Expressions samajhne ki chaabi yahi hai.

1 🔧 Upload Sales CSV

Form se file aayi. JSON mein sirf submit ki info hai; asli file "Binary" tab mein sales_csv naam se hai.

```
{
  "submittedAt": "2026-12-02T20:05:00+05:30",
  "formMode": "test",
  "[binary] sales_csv": {
    "fileName": "sample-sales.csv",
    "mimeType": "text/csv",
    "fileSize": "1.1 kB"
  }
}
```

2 🔧 Read CSV

File ki har row ek alag ITEM ban gayi (20 items). Dhyan do: amount abhi text ("698") hai.

```
{
  "order_id": "ORD-1001",
  "date": "2026-11-02",
  "city": "Bengaluru",
  "product": "Mug",
  "amount": "698",
  "…": "(+19 aur items)"
}
```

3 🔧 City-wise Total

Code ne 20 items ko city ke hisaab se joda → 5 items (5 cities). Number() se amount ko number banaya, isliye sahi total aaya.

```
{
  "city": "Bengaluru",
  "orders": 4,
  "sales": 7092,
  "…": "(+4 aur cities)"
}
```

4 🧾 Build HTML Table

5 items ek item mein jud gaye: html (table) + grand (kul total). Ab sirf 1 email jaayega.

```
{
  "html": "<h2>City-wise Sales Report</h2><table>…</table>",
  "grand": 29109
}
```

5 📧 **Email Report**

Ek HTML email chala gaya.

```
{
  "id": "18c5a1f0c2b9e7d4",
  "threadId": "18c5a1f0c2b9e7d4",
  "labelIds": [
    "SENT"
  ]
}
```

Node anatomy — har setting ka matlab

Har zaroori option kya karta hai aur kab badalna hai. Isse aap khud naye workflows bana paoge.

n8n Form Trigger (File field)

Aaj form se file upload karwaayi.

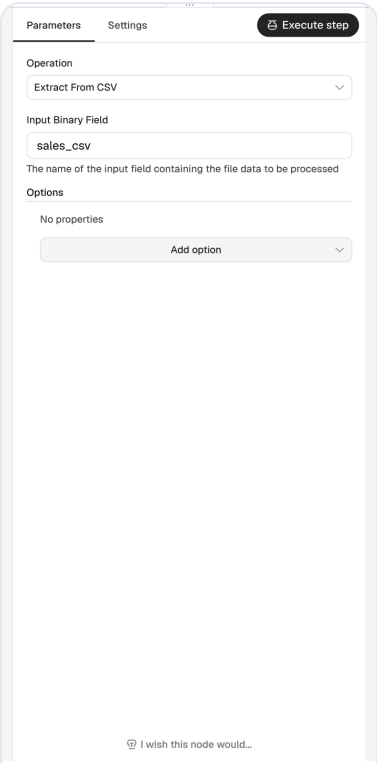

📸 Asli n8n: n8n Form Trigger (File field)

Setting	Kya karti hai	Aaj ki value	Kab badlein
Element Type	File	`File`	Image/PDF/CSV sab chalti hain
Field Label	Yahi binary field ka naam banta hai	`sales_csv`	Space mat rakho, _ use karo
Accepted File Types	Sirf yeh extensions allowed	`.csv`	PDF ke liye .pdf; kai ho to .jpg,.png
Multiple Files	Ek se zyada file	`Off`	On karoge to sales_csv_0, sales_csv_1 banenge

Extract from File

File ke andar ka data padhkar JSON items banata hai.

AdifySkills DIGITAL MARKETING INSTITUTE +91 83838 91716

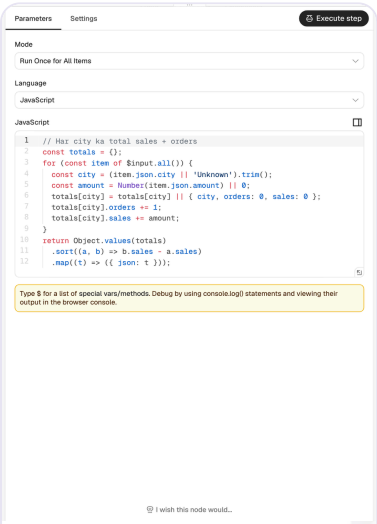

📸 Asli n8n: Extract from File

Setting	Kya karti hai	Aaj ki value	Kab badlein
Operation	File ka type: Extract From CSV, XLSX, PDF, JSON, HTML, Text…	`Extract From CSV`	Excel ke liye XLSX, invoice ke liye PDF
Input Binary Field	Kaunsi file padhni hai (binary field ka naam)	`sales_csv`	Default "data" hota hai — badalna mat bhoolo
Options → Header Row	Pehli row column naam hai?	`On (default)`	Headers na hon to Off
Options → Delimiter	Columns kisse alag hain	`, (comma)`	Kuch files mein ; hota hai
Options → Max Rows	Kitni rows padhni hain	`sab`	Testing mein 10 rakh lo

👨‍💻 Code (JavaScript)

Jab koi ready node kaam na kare, wahan apna logic likho.

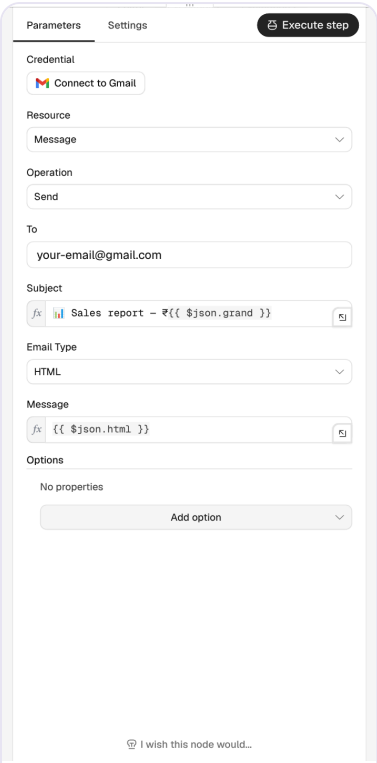

📸 Asli n8n: Code (JavaScript)

Setting	Kya karti hai	Aaj ki value	Kab badlein
Mode	Run Once for All Items (saare items ek saath) ya Run Once for Each Item	`Run Once for All Items`	Total/group ke liye All Items
Language	JavaScript ya Python	`JavaScript`	n8n ke examples zyada JS mein
$input.all()	Saare input items ki list	`for (const item of $input.all())`	Har item ka data item.json mein
return	Hamesha items ki list lautao: [{ json: {...} }]	`return [{ json: { html, grand } }]`	Galat format = "Code doesn't return items" error

📧 Gmail — HTML email

Aaj Gmail ka naya use: design wali HTML table.

📸 Asli n8n: Gmail — HTML email

Setting	Kya karti hai	Aaj ki value	Kab badlein
Email Type	HTML	`HTML`	Table, bold, colors ke liye zaroori
Message	HTML code expression se	`{{ $json.html }}`	Pehle node mein HTML banao, yahan sirf daalo
Subject	Total ke saath	`📊 Sales report — ₹{{ $json.grand }}`	Subject mein main number = email jaldi khulta hai

⚖️ Pehle vs Ab — farak dekho

Yahi farak client ko dikhana hai. Time bachta hai = paisa bachta hai.

😫 Pehle (manual)

Excel kholna	2 min
City-wise filter + total	20 min
Summary type karna	10 min
Email bhejna	3 min
	35 min

⚡ Ab (n8n)

CSV aate hi summary email

0 min

⏱ Har report par 35 min bache, calculation galti zero.

⌨️ Aaj ka key snippet

Copy karke n8n mein paste karo — 📋 Select karke copy karo

```
{{ $input.all().length }}  // kitne items aaye
```

📦 Sample data — input se output tak

📥 Input — 📋 Select karke copy karo

```
[
  {
    "city": "Delhi",
    "amount": 1200
  },
  {
    "city": "Pune",
    "amount": 800
  },
  {
    "city": "Delhi",
    "amount": 500
  }
]
```

📤 Output — 📋 Select karke copy karo

```
[
  {
    "city": "Delhi",
    "sum_amount": 1700,
    "count": 2
  },
  {
    "city": "Pune",
    "sum_amount": 800,
    "count": 1
  }
]
```

💬 Copy-paste prompts

ChatGPT / Claude mein seedha paste karo. PDF mein text select karke copy ho jata hai.

💬 Build it with ChatGPT / Claude — 📋 Select karke copy karo

```
Act as an n8n expert and teacher. Help me build this workflow in n8n step by step (n8n 1.x UI):

Goal: Form par sales ki CSV file upload karo. Workflow file padhta hai, city-wise total nikaalta hai aur ek saaf HTML table email karta hai.

Flow: Form (file upload) (sales.csv) → Extract from File (CSV → items) → Code (City-wise sum) → Code (HTML table) → Gmail (Report email)

For each node tell me: which node to add, exact settings, and the expressions to use. Then tell me how to test it and the 3 most common errors beginners hit.
```

💬 Debug helper prompt — 📋 Select karke copy karo

```
I'm building the n8n workflow "CSV Sales → City-wise Report Email" (nodes: Upload Sales CSV, Read CSV, City-wise Total, Build HTML Table, Email Report).
Node "<NODE NAME>" gives this error:
<PASTE ERROR>

Input JSON of that node:
<PASTE INPUT>

Explain the cause in simple words and give me the exact fix (settings or expression).
```

📥 Workflow ko n8n mein kaise laayein

1. **Workflow JSON** wale button par click karo (ya lesson page par 📋 **Copy workflow JSON** dabao).
2. Poora text copy karo (`Ctrl` + `A` , `Ctrl` + `C`).
3. n8n mein naya workflow kholo → canvas par click → `Ctrl` + `V` . Ya … menu → *Import from File*.
4. Upar wala Setup checklist poora karo aur **Test** dabao.

⚡ **Workflow JSON**
5 nodes · ready to import
`adifyskills.com/workflows/day-03-csv-city-sales-report.json`

🌐 **Lesson page**
Copy buttons, quiz aur video links
`adifyskills.com/day/3`

🧯 Atak gaye? Yeh check karo

Error aana seekhne ka hissa hai — sab atakte hain. Neeche wale points se 90% problems solve ho jaati hain.

Agar yeh ho raha hai…	To yeh karo
Node par laal ⚠️ triangle?	Account connect nahi hua. Node kholo → Credential → "Gmail (Google OAuth)" connect karo.
Webhook/Form test par kuch nahi ho raha?	"Listen for test event" / Test URL use karo aur 2 minute ke andar request bhejo. Production URL sirf Active workflow par chalta hai.

⚠️ Yeh galtiyan sabse common hain

- ! Ek item expect karna jab 50 items aa rahe hon (har email 50 baar jayega!)
- ! Nested array ko bina Split Out ke process karna
- ! Binary property ka naam galat dena (data vs file)

⭐ Pro tips — time bachane wali tricks

- ★ Output panel mein Table / JSON / Schema views badal ke dekho
- ★ Item count node ke upar dikhta hai — hamesha check karo
- ★ Aggregate se pehle Sort karo agar order matter karta hai

Phir bhi atke? Koi baat nahi 🙂
Screenshot + error message ke saath WhatsApp par poochho →

🏋️ Practice + Challenge

Padhne se zyada banane se seekhte hain. Ek-ek level upar jaao.

🛠 Live lab

CSV sales file ko process karke city-wise summary nikaalna aur email karna.

📝 Homework

Public API (e.g. JSONPlaceholder) se data laake usse Split Out + Aggregate se transform karo.

- ☐ Homework ho gaya

BEGINNER

Sirf Delhi ke orders filter karo

INTERMEDIATE

Top 3 cities sort + limit

ADVANCED

Summary ko Excel file bana ke attach karo

🧩 Aaj ka challenge — pehle khud try karo

🎯 Report mein sirf woh cities dikhao jinki sales ₹5,000 se zyada hai.

💡 Hint 1

Code node ke baad ek naya node lagao jo items ko chhaant de.

💡 Hint 2

Filter node mein condition: sales (number) "is greater than" 5000.

✅ Solution aakhri page par hai — pehle 5 minute khud socho 😉

AdifySkills DIGITAL MARKETING INSTITUTE +91 83838 91716

🧪 Expression practice sheet

Input dekho aur khaali jagah mein expression likho. Jawab aakhri page par hain.

1. Kitne items aaye? (Code/expression)

```
{"note":"20 rows"}
```

Mera jawab: _____

2. Text amount ko number banao

```
{"amount":"1200"}
```

Mera jawab: _____

3. Nested field: customer ka naam

```
{"customer":{"name":"Asha","city":"Pune"}}
```

Mera jawab: _____

4. List ka pehla tag

```
{"tags":["new","upi"]}
```

Mera jawab: _____

5. Amount ko ₹ format mein (Indian commas)

```
{"amount":125000}
```

Mera jawab: _____

🎯 2 minute ka self-check

Sahi option par gol ghera lagao. Answers aakhri page par — score sirf aapke liye hai.

Q1. 10 items ek Gmail node mein jaayein to kitne emails?

(A) Error
(B) 1
(C) 10
(D) 0

Q2. Kai items ko ek list banane ka node?

(A) Filter
(B) IF
(C) Split Out
(D) Aggregate

Q3. PDF file n8n mein kahan hoti hai?

(A) binary
(B) headers
(C) credentials
(D) json

Q4. JSON mein list kis bracket mein?

(A) {}
(B) []
(C) ()
(D) <>

📖 Aaj ke naye shabd

Workflow
Steps ki ek chain jo apne aap chalti hai — jaise recipe ke steps.

Node
Workflow ka ek dabba/step. Har node ek kaam karta hai (email bhejna, data laana…).

Trigger
Jo workflow ko START karta hai — jaise alarm, naya email, ya form submit.

JSON
Data likhne ka format: { "naam": "Ravi", "city": "Delhi" } — key aur value ke jode.

Item
Data ki ek row/record. n8n mein data items ki list ki tarah flow karta hai.

Binary
File wala data — PDF, image, CSV. Text se alag hota hai.

HTTP Request
Node jo kisi bhi API ko call kar sakta hai — n8n ka universal connector.

AdifySkills DIGITAL MARKETING INSTITUTE +91 83838 91716

👨‍🏫 Mentor notes — class kaise lein

Yeh page sirf aapki copy mein hai. Students ki PDF mein nahi jaata.

- [ ] Whiteboard par items ko boxes ki tarah draw karo
- [ ] Ek hi workflow mein 1 item vs 10 items ka farak live dikhao
- [ ] Module 1 quiz yahin karwao (15 min)

🗣️ Har block ke liye mentor tip

10m — Recap

2 students se homework screen share karwao. Galti wala homework bhi dikhao — sabse zyada seekh wahin se aati hai.

Class se poochho: Kal wale workflow mein sabse mushkil step kaunsa laga? · Homework mein kahan error aaya aur kaise theek kiya? · Kal ka ek node naam batao aur woh kya karta hai?

40m — Concept: Data Structure

Pehle real-life example se shuru karo, phir n8n screen dikhao. Har concept ke baad 1 student se apne shabdon mein dobara bulwao.

Class se poochho: 5 items Gmail node mein jaayein to kitne emails jaayenge? · JSON mein list kis bracket mein hoti hai? · PDF file n8n mein kahan rehti hai?

40m — Live Build

Har 10 minute par poocho "sabka green tick aaya?". Jaan-boojh ke ek galti live hone do aur use debug karke dikhao.

Class se poochho: Is node ka output agle node mein kaise ja raha hai? · Agar yeh node fail ho to kya hoga? · Isko apne kaam/business mein kahan use kar sakte ho?

20m — Quiz + Challenge

Pehle 5 minute akele try karne do, phir hint do. Jo solve kare use screen share karwao.

Class se poochho: 10 items ek Gmail node mein jaayein to kitne emails? · Kai items ko ek list banane ka node? · PDF file n8n mein kahan hoti hai?

10m — Q&A + Homework

Chat se top 3 doubts live solve karo. Homework ka pehla step class mein hi karwa do, taaki koi blank na baithe.

Class se poochho: Aaj ka sabse useful node kaunsa laga? · Homework mein pehla step kya hoga? · Aaj ki class 1 line mein summarize karo.

✍️ Meri notes

Class mein jo naya laga, jo doubt aaya — yahan likho. Kal revise karna aasaan hoga.

⏭ Kal kya seekhenge — Day 4

Expressions & Data Transformation

"{{ }} — n8n ki asli superpower."

☐ **Day 3 complete! 🎉**

Tick karo aur website par bhi ✅ dabao.

🔑 Answer key + useful links

Pehle khud try kiya? Ab check karo. Galat hua to explanation padho — wahi asli seekh hai.

Q1 → C
10
Har item ke liye node ek baar chalta hai.

Q2 → D
Aggregate

Q3 → A
binary

Q4 → B
[]

✅ Challenge ka solution

City-wise Total ke baad Filter node: {{ $json.sales }} → Number → is greater than → 5000. Phir Build HTML Table.

🧪 Expression sheet ke jawab

1. `{{ $input.all().length }}` → **20**
2. `{{ Number($json.amount) }}` → **1200**
3. `{{ $json.customer.name }}` → **Asha**
4. `{{ $json.tags[0] }}` → **new**
5. `₹{{ $json.amount.toLocaleString("en-IN") }}` → **₹1,25,000**
